

# MEETING MINUTES

**DATE:** 2025-10-28 @ 11:00 AM EST | **ATTENDEES:** Brett, David, Ivan, Marc, Nathan, Amish, Anish, Zaki, Fares

## OVERVIEW

The team demoed the current OIM app interface to the partners (Brett, Marc, Ivan) and collected detailed feedback on UI, interaction patterns, and next steps. The overall progress was appreciated, especially given the short timeline, but several improvements and clarifications were noted for upcoming iterations.

---

## 1. UI & ORIENTATION

- Marc recommended locking OIM to a single landscape orientation (right-side) for consistency.
- Ivan asked about arrow indicators; Anish clarified they won't appear on the final transaction history screen.

## 2. TRANSACTION HISTORY

- Brett suggested using his date frame layout for clearer grouping.
- Colour coding (green/red) can be used, but alternative cues (haptic, audio, graphics) should also support accessibility.

## 3. MONEY TRANSFER & ICONOGRAPHY

- Brett encouraged exploring more visual, realistic metaphors for sending money.
- He noted many purpose icons are available and can be adapted (including black-and-white versions).
- Brett also shared a 100 Leone note image that can support asset creation.

## 4. BANKNOTES DISPLAY

- Marc asked the team to consider how notes are displayed.
- Brett emphasized not stacking notes; instead, use columns so they are easy to count.
- Marc has already been limiting notes to column layouts.

## 5. APP SIZE

- App size is ~40MB, for Marc's iOS App

## **6. PARTNER FEEDBACK**

- Ivan: Appreciated the progress made in a short time.
- Brett & Marc: Encouraged a focus on clarity, realistic visuals, and a consistent landscape experience.
