

MEETING MINUTES

DATE: 2025-11-09 @ 2:00 PM EST | **ATTENDEES:** Nathan, Amish, Anish, Fares

OVERVIEW

The team reviewed progress on bug fixes, UI issues, and new views. Most send bugs are resolved, but several UI and receive-screen problems remain. Next steps focus on stabilizing builds, fixing visuals, and aligning data with the partner's system.

1. PROGRESS UPDATES

- Send Bugs:
 - Anish and Amish fixed most major send-flow bugs and completed the base for river view.
- Additional Views:
 - The team discussed adding a lake view to match the partners' expectations.

2. DATA & CURRENCY CONSIDERATIONS

- The app should eventually pull data from the partner's transaction database, not the temporary one currently used.
- There may be a need to add Canadian currency assets, depending on partner requirements.

3. UI & ASSET ISSUES

- Translucent background issues during the coin animation may be due to asset transparency, not the send screen itself. Needs verification.
- QR Code fixes required; Fares may assist.
- On smaller screens, purpose icons and bills overlap; layout adjustments needed.
- Filters will not be implemented.

4. SCREEN SPECIFIC WORK

- Home Screen
 - General UI bugs need to be fixed.
- Receive Screen
 - UI needs correction; logic may also need review.
 - Fares will take lead on Receive flow.
- Notes Display
 - When users tap on notes, they should open in a column layout (not stacked).

5. BUILD TESTING

- Team needs to continue checking builds to ensure all changes propagate correctly:
 - Send flow
 - Receive flow
 - Transaction visuals
 - QR scanning → transaction confirmation
