MEETING MINUTES

DATE: 2025-11-25 @ 11:00 AM EST | ATTENDEES: Brett, David, Ivan, Marc, Nathan, Amish, Anish

OVERVIEW

In this meeting, the partners reviewed the OIM interface and provided detailed feedback on balance visibility, date and transaction representations, icon sizing, currency handling, and screen-specific improvements. The discussion focused heavily on refining the Transaction River, improving visual metaphors, simplifying date displays, and ensuring realistic note/coin proportions. The team also aligned on removing extreme edge cases, standardizing currency frames, and implementing clearer logic for note aggregation and representation across screens.

---

1. OIM MODE & ORIENTATION

- Decision needed on whether to show balance; agreed to display it in the top-right corner using Indo-Arabic digits.
- Marc's current version uses Arabic notation.
- Marc requested auto-rotation; the team explained previous crashes and noted it may not be feasible in time.

2. ICON SIZE & VISUAL ADJUSTMENTS

- Icons across the app should be 33–50% larger and visually consistent.
- Transaction River icons will also be enlarged for clarity.

3. RIVER SCREEN

- David found the current dots + lines combination unintuitive.
- Brett suggested adding a dynamic date component above the lake/farm area.
- Send and Receive should be separate buttons beside the farms/lakes, arranged using columns, not a box layout.
- Year is unnecessary in the date display.
- Ideally, the view should be zoomable like Google Maps, but for now → Show 1–2 months, only month + day.

4. BALANCE DISPLAY

- Final placement: top-right corner, Indo-Arabic numerals.

5. LIST VIEW FEEDBACK

- Large transactions (beyond 5–7 notes) break the wallet metaphor.
- Big numbers (e.g., 100,000 XOF) are unrealistic physically; ok for TA demo but remove for final delivery.
- Brett prefers using a currency frame for clarity.

6. BRETT'S CURRENCY FRAME

- Should be used consistently across all cards in Transaction List View.

7. SEND SCREEN

- Do not stack notes across denominations.
- After ~4 notes, auto-convert to the next higher denomination.
- Keep column view as default.
- Implement auto-aggregation logic.

8. MAIN CHEST SCREEN

- Same-denomination notes should stack; multiple denominations should display as columns.
- In-person meeting planned next week (Brett, possibly David).
- Use current Canadian currency for now; send assets to Marc.
- Remove SLE 40 and SLE 1000; max needed is SLE 100.
- Brett to provide graphics for large bundles (e.g., "gaddi of 100 tens").
- Edge cases to consider: 999, XOF large-value graphics.

9. DESIGN CHOICES + ASSUMPTIONS

- List view relies on a degree of literacy.
- The transaction-as-one-entry approach has logic tied to chronology.
- Early usability testing showed timelines may be hard to understand.
- The team should consider challenging assumptions to find the most intuitive representation.

10. RECEIVE SCREEN

- Remove arrows.
- Ensure notes/coins remain proportional to real-life sizes.
